Aviary System Meets the Latest Standards

When Adam and Alicia DeVisser were presented with a unique opportunity to raise pullets for vaccine egg production in an aviary system, they jumped at the chance and began the process of planning a leading-edge pullet barn that would incorporate the best in bird comfort and development, efficient operation from both an energy and labour standpoint, and quality equipment that would last a lifetime. When it came to the housing equipment, the Valli Baby Area pullet housing system was an easy choice for them. Since Adam works as a poultry design and sales representative for County Line Equipment, he was already very familiar with the Valli line of poultry housing equipment, and how Valli stands behind their product.

A Proven Path To Healthier Birds

In rearing a pullet destined for an aviary layer barn, it is crucial to have a housing system that offers the pullets as many opportunities as possible in early development to challenge themselves physically through jumping, climbing, perching and inclines, building coordination and flexibility as well as strong muscles, bones and connective tissue. This early development translates into a resilient and athletic bird that will be able to adapt to the aviary housing in the layer barn and thrive though the entirety of egg production. The Valli Baby Area checks all these boxes while offering maximum flexibility and labour efficiency.

Valli – The Best in Bird Comfort

Valli's alternative poultry housing brings welfare, efficiency, and practical management together for pullets and laying hens. Designed around natural bird behaviour, Valli aviary systems provide shared spaces that encourage movement, perching, scratching, dust bathing, and secure nesting, while supporting strong production results. Thoughtful placement of feeding, drinking, nests, manure belts, and inspection access helps producers manage flocks confidently and maintain clean, efficient barns. From pullet rearing through lay, Valli solutions are built for comfort, durability, and dependable performance.

Energy Efficient Design

The barn's minimum ventilation features Skov's DA 820 fans using high efficiency VFD motors and variable dampers for precise control of airflow. Air intake is handled by Skov ceiling inlets which feature a pull-open, spring close design for more accurate positioning. For the hot summer days, the tunnel design utilizes the J&D Mfg. Magnum 58" fans paired with a Cumberland insulated tunnel door system and evaporative cooling system. Integrating all this together is Skov's world class climate and production controller, BlueControl. The BlueControl constantly learns from past conditions, assesses current conditions, and predicts future conditions to make small adjustments and maintain an optimal environment in the barn.

Completing the project with County Line Equipment

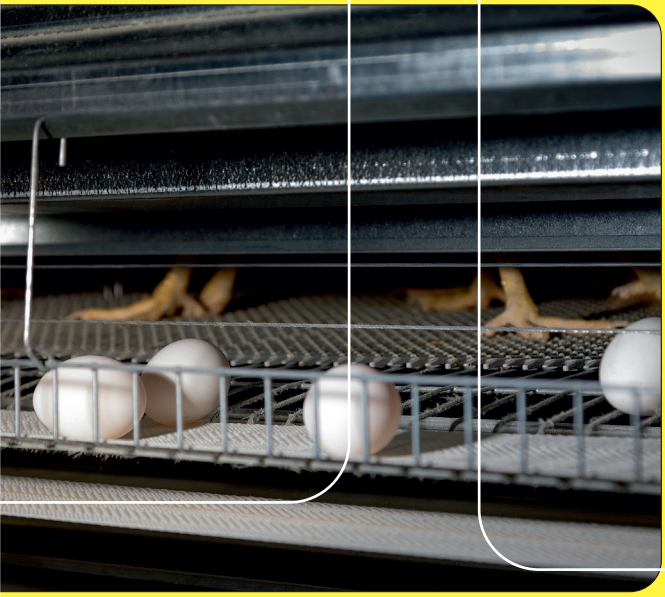

Though the build process, Adam couldn't be happier with how he was supported by County Line Equipment. "It's a fantastic company to work for and the whole team strives to support the customer's projects as if they were their own" says Adam. "Building this barn really gave me perspective on the challenges and pressures our customers face throughout the build process, and how critical it is to have the support of a supplier that really cares and has the expertise to follow through when challenges arise".

VALLI®

CountyLine 25+ YEARS PROVEN EXPERIENCE

Quality is a lifestyle.

VALLI ENRICHED HOUSING

The VOLO BABY AREA is the ideal housing system for pullets, with all the main components integrated, while the SPACE COLONY, an enriched cage for raising laying hens, allows you to customize the multi-level configuration from 3 to 12 floors.

Valli-Italy operates on the premise of passion and quality to ensure each producer recieves the ideal system for their operation.
